

FOR IMMEDIATE RELEASE

U4EA Technologies and Interlink Communications Systems Announce Distribution Agreement

Partnership Expands U4EA's Distribution Network in North America

FREMONT, CA – August 11, 2008 – U4EA Technologies, Inc., a leading provider of integrated access technology for converged communications, today announced a distribution agreement with Interlink Communications Systems, an internetworking-focused specialty distribution company. The agreement enables Interlink to promote and market U4EA's Fusion multi-service business gateways to its national reseller and dealer network.

"Interlink is very selective in the equipment we distribute to our resellers – only recommending products that are the most reliable and cost-effective in LAN and WAN networking," said Scott Eudy, VP of Marketing & Business Development at Interlink. "U4EA's Fusion multi-service business gateways are cutting-edge solutions for the delivery of integrated voice, data and video services, offering SMBs consolidated equipment, improved QoS and bandwidth utilization, high security and the latest SIP functionality. We are delighted to partner with U4EA to offer the Fusion Series through our dedicated VoIP resellers and dealers."

"As the multi-service business gateway category takes off, and demand for U4EA's products grows, we will continue to look for the right avenues to expand distribution," said Jay Bowker, VP of Worldwide Sales at U4EA Technologies. "Interlink is a respected distributor known for quality, professionalism and VoIP expertise. We look forward to working with Interlink to bring the Fusion series to a whole new group of VARs and system integrators."

U4EA's Fusion Multi-service Business Gateway product line consists of three families of products. The Fusion 200, 400 and 500 series are all-in-one integrated IP communications devices which enable secure delivery of mission-critical and time sensitive VoIP and multimedia applications, with cost savings through integrated functionality and superior access bandwidth utilization. All Fusion CPE products incorporate U4EA's revolutionary QoS technology, GoS™, which enables SMEs and enterprises to maximize high utilization of network access bandwidth, while guaranteeing quality for critical real-time traffic such as voice or video calls, streaming media, and higher priority data traffic.

About U4EA Technologies

U4EA Technologies is a leading provider of Multi-service Business Gateways (MSBG) that enable service providers to deploy highly integrated, robust, and easy-to-manage IP communications solutions to SMB and enterprise customers. U4EA's all-in-one customer premises devices, supported by the company's patented QoS (GoS) mechanisms, ensure the secure, reliable and cost-effective delivery of converged VoIP, data and video services. In addition, U4EA Wireless meets SMB, enterprise and service provider requirements for seamless mobility for voice, data and video applications. The U4EA Fusion Series also includes next generation network signaling gateways, which enable

carriers to interconnect legacy networks and equipment with Next Generation Networks. For more information, visit U4EA at www.u4eatech.com.

About Interlink Communications Systems

Founded in 1990, Interlink Communication Systems is an internetworking-focused specialty distribution company representing manufacturers to an international network of Value Added Resellers, System Integrators and Network Service Providers. Interlink's areas of expertise include IP telephony, wireless, data center connectivity, network security, Local Area and Wide Area Networking (LAN/WAN), and access aggregation and optimization. Interlink has been ranked among the Tampa Bay Technology Fast 50, INC. 500, and more recently, received mention on the VAR Business 2006 List of Distributors to Watch.
