

A New Reality Sets In

Make Interlink Your Partner in Providing Economical VoIP to Small and Midsized Businesses

For years, small and midsize business (SMB) owners and managers have heard how great VoIP will be for their companies. But what they found was either too expensive or inadequate to meet their expanding needs. That's about to change.

Interlink has brought together best-of-class vendors to create a comprehensive VoIP solution for the SMB/SME market. At last, here's the take-to-market (scalable) VoIP solution that is economically viable for VARs and commercial end-user customers.

About Interlink

Founded in 1990, Interlink Communication Systems is a specialty distribution company representing selected network solutions manufacturers to an international network of value-added resellers (VARs), system integrators and network service providers. The company represents such best-in-class manufacturers of network equipment as: ADTRAN, BelAir Networks, Digium, Expand Networks, Fluke Networks, Infinity Security Solutions, MRV Communications, snom, U4EA Technologies and Vegastream.

Interlink's technical, sales and support teams give customers access to highly qualified sales and factory-trained system engineers who possess tremendous networking, wireless, VoIP and Open Source expertise. Both you and your customers can be confident that business requirements will be covered and that Interlink solutions are comprised of the very best product mix.

Interlink Makes It Real

The Promise of VoIP for Small and Midsized Business is Finally Fulfilled!

- A complete, best-of-breed VoIP solution package for locations of 12 – 200 or more employees with support for multiple sites
- Optimal mix of VoIP components assembled from the top manufacturing companies in the IT industry
- A price point that is up to 50% less than current offers by vendors who market to enterprise-class companies

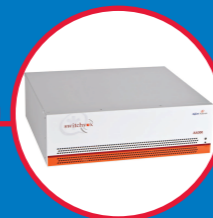

Now you can provide your smaller business customers with the benefits of advanced unified communications at a price that makes sense for them!

ADTRAN NetVanta

Digium IP PBX

Infinity Firewall

U4EA Gateway

Interlink Puts It All Together

Presenting a solutions-based approach to VoIP that works for small and mid-sized businesses

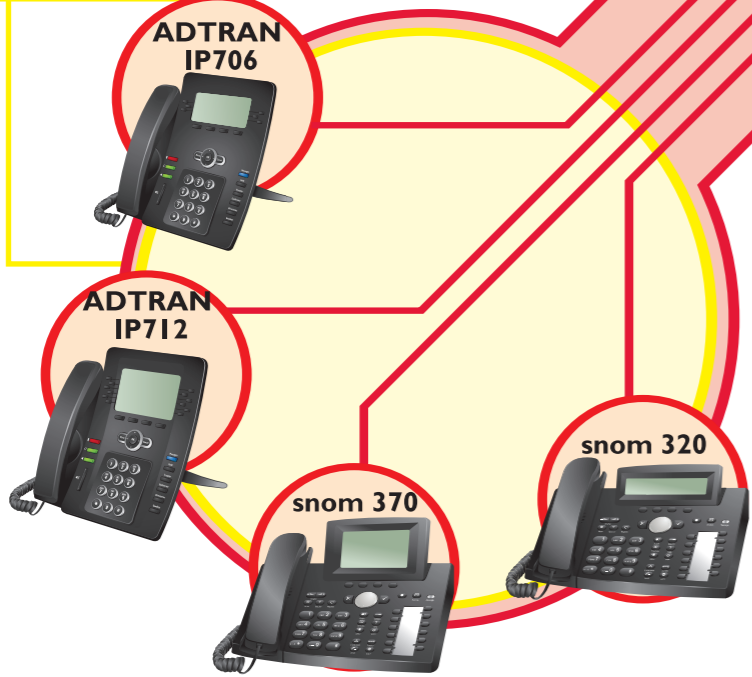

Digium® Switchvox™ IP PBX

- Specialized VoIP server
- Based on open-source Asterisk®, standards-based SIP interfaces
- Hardened for business-level capabilities and graphical user interface-unified communications

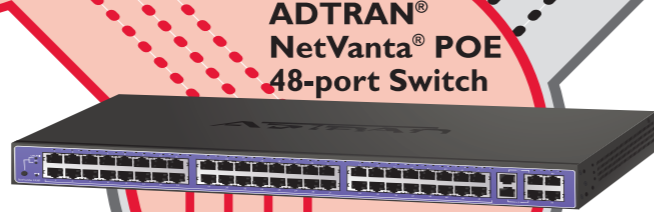

VoIP Phones

- Standards-based phone support for multiple models
- Different brands can be mixed in same solution
- Different number of lines and wireless support

ADTRAN® NetVanta® POE Switch

- VoIP functions better with POE and QOS support
- Managed switch allows remote and GUI analysis
- 24- and 48-port switch supports SMB current and future growth

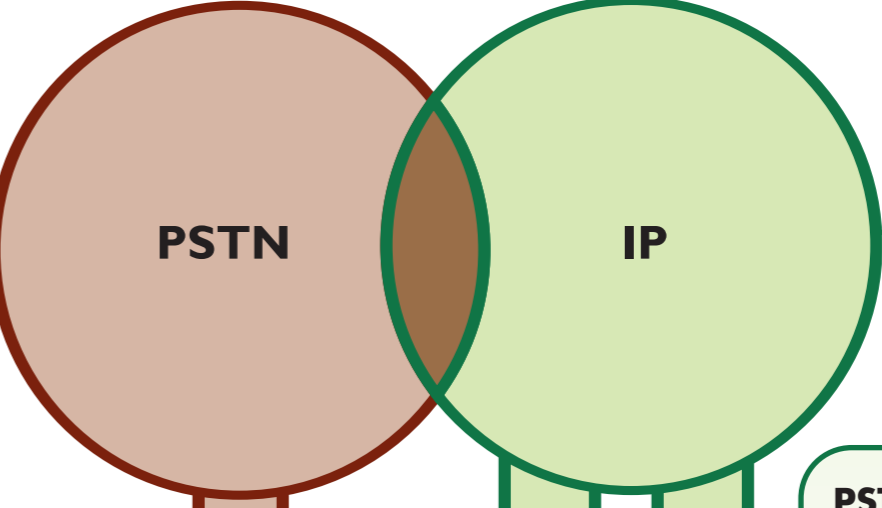

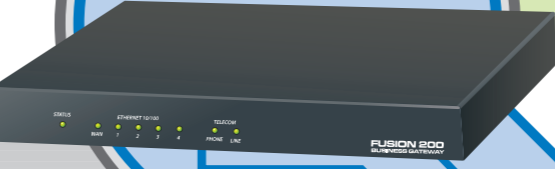

Infinity Security TruePerform™ Firewall

- Next generation firewall that has strong support for VoIP data characteristics
- VoIP focused wire speed small packet enabled firewall
- Strong support for capacity or performance-sensitive applications

U4EA Technologies Multi-Service Business Gateways

- Gateway function plus expanded remote support
- Provides connections to remote VoIP phones over VPN with firewall
- Provides E911 and local calling with support for FXO and FXS connections

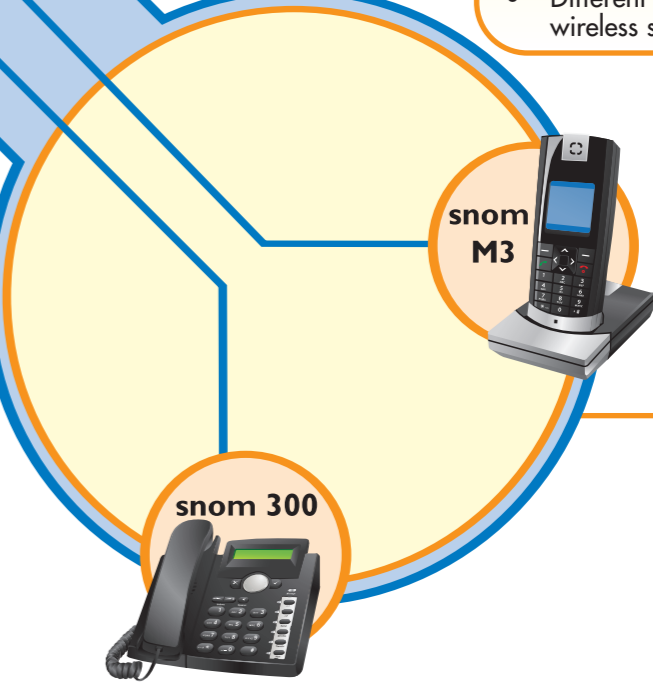

PSTN, IP Networks and SIP Trunks

- PSTN – Old phone network, still used for back-up and remote office local calling.
- IP – New network, data centric providing low cost SIP trunks to new phone solution and connection to old phone network.
- Both Networks overlap and co-exist in the telecom carrier cloud.

VoIP Phones

- Standards-based phone support for multiple models
- Different brands can be mixed in same solution
- Different number of lines and wireless support

Interlink has assembled best-in-class components to deliver a comprehensive VoIP solution that can be scaled to 200+-employee, multi-site environments.
